# To-Do List Website

Daily, Weekly, and Monthly Trackers

To-Do List website

Designed to enhance your task management experience. This platform streamlines how you organize, track, and complete your tasks, making your daily life more efficient and productive.
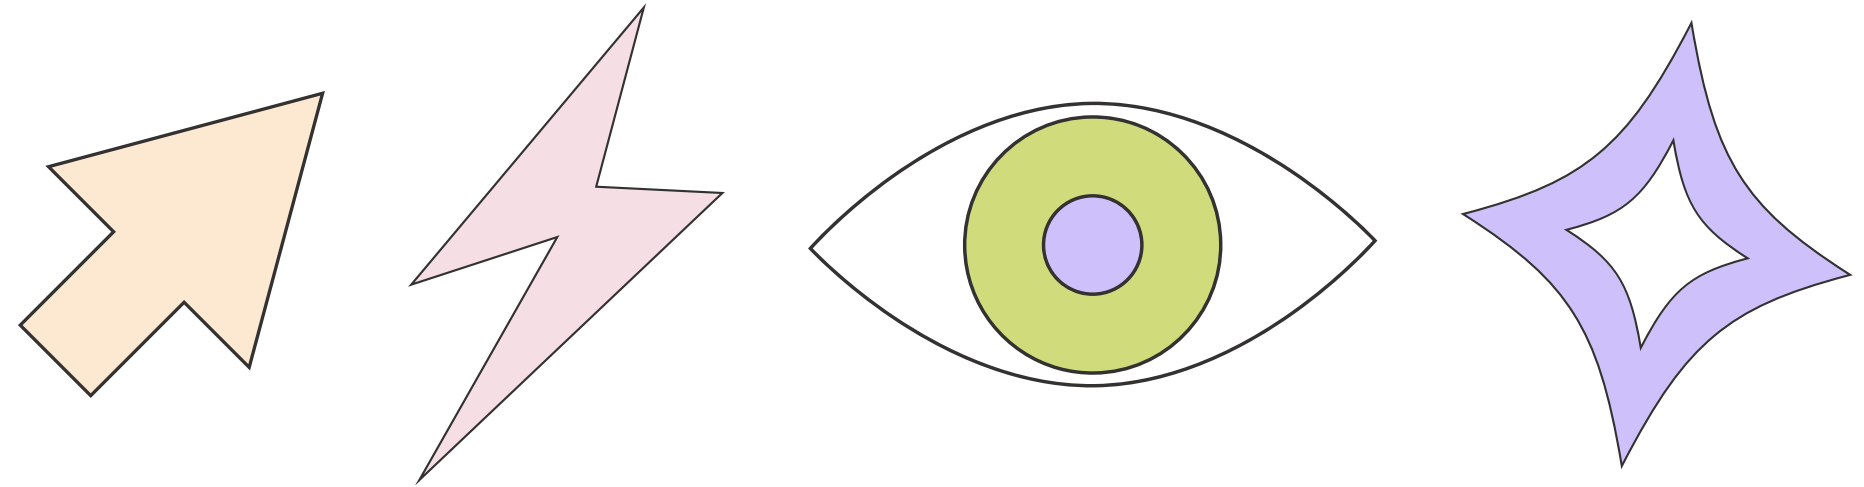

Project Requirements Overview

This project effectively addresses a comprehensive set of requirements, showcasing a diverse range of programming concepts and techniques:

- Variety of Data Types
- Data Structures (lists and dictionaries)
- Looping Constructs
- Functions with Outputs
- Conditional Statements
- Lambda Functions

Task Management

Effortlessly add, edit, and delete tasks to keep your to-do list up to date.

Priority Levels

Organize your tasks by assigning priority levels—High, Medium, or Low—to focus on what matters most.
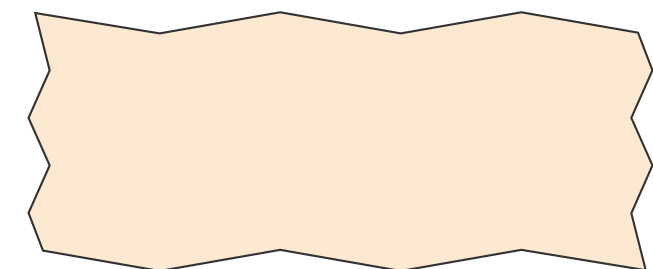

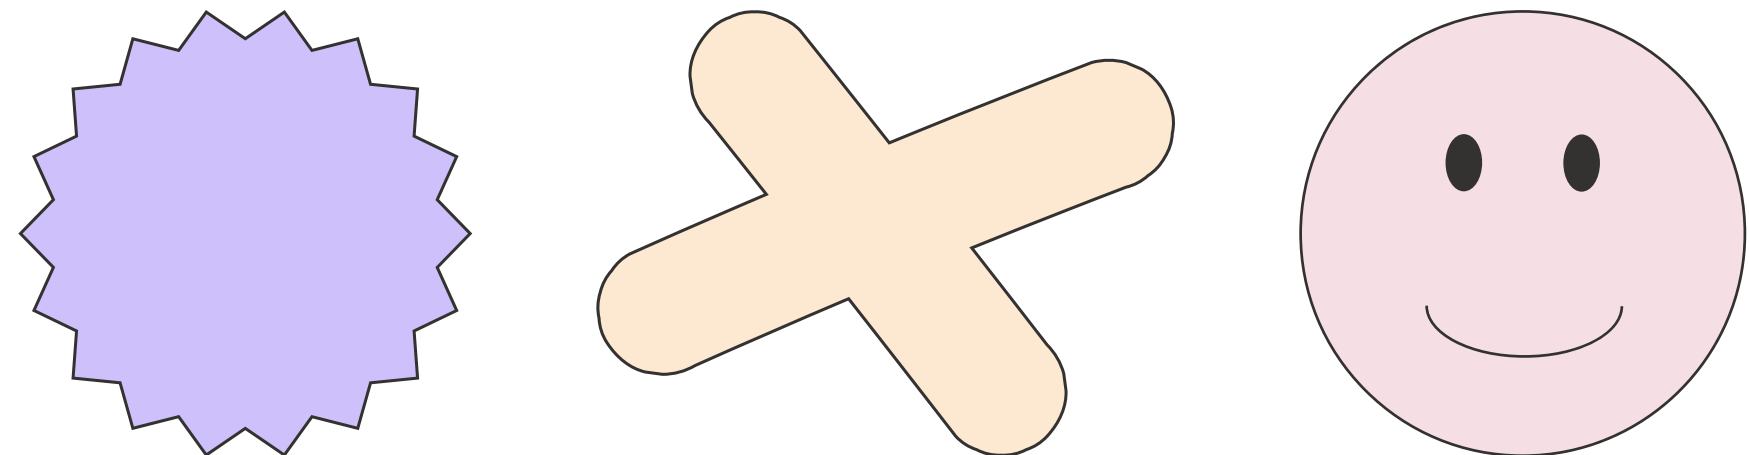

Notes Section

Add extra details and context to your tasks with a dedicated notes section for better clarity.
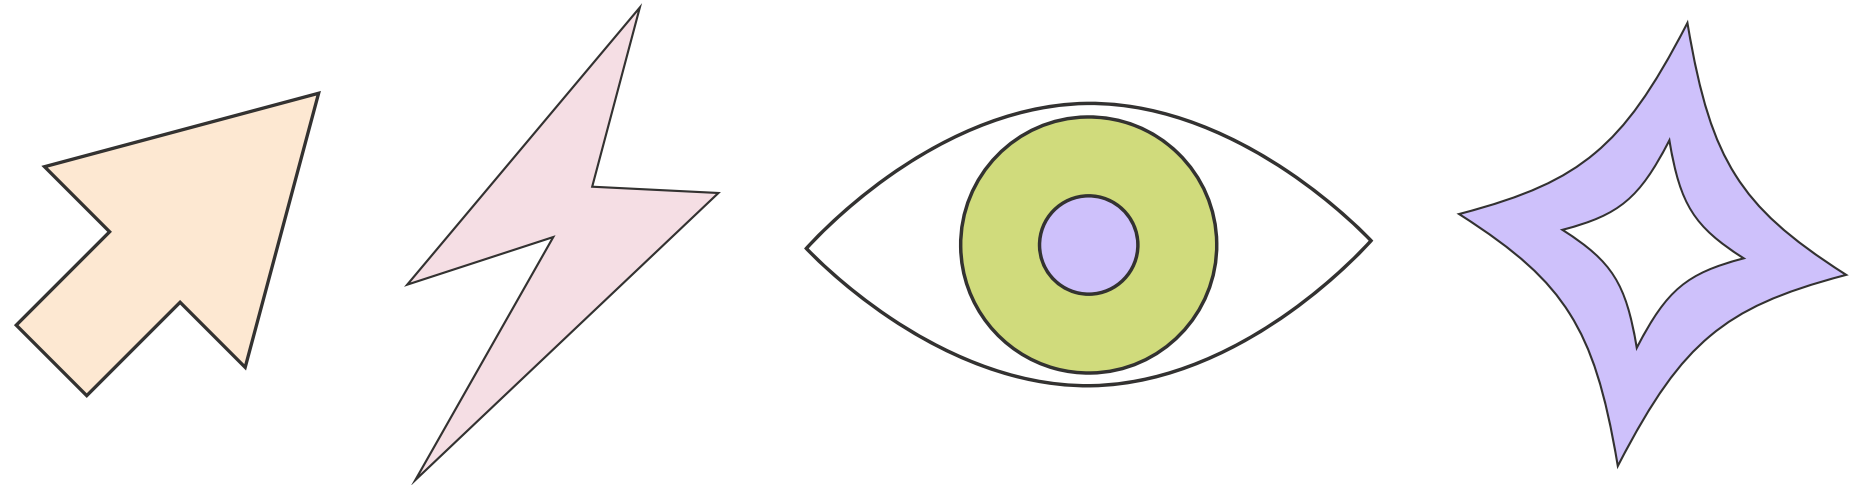

Dark/Light Mode Toggle

Customize your viewing experience with a toggle feature that allows you to switch between dark and light modes.
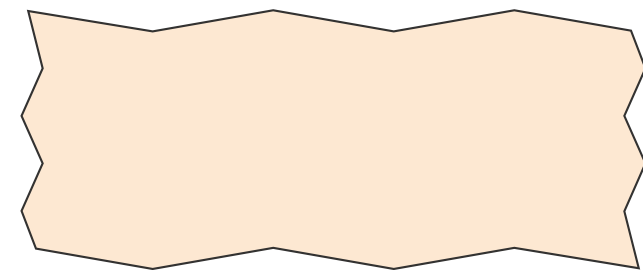

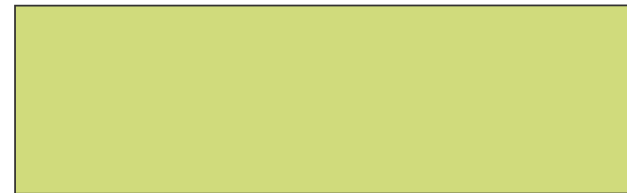

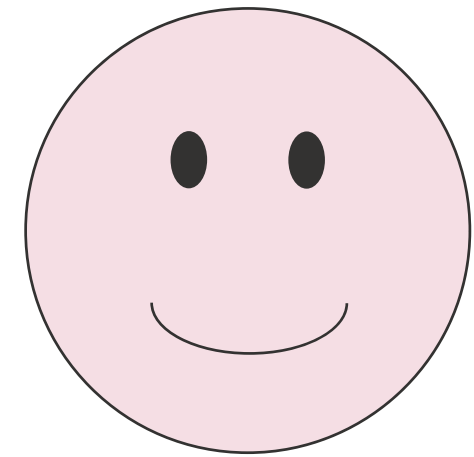

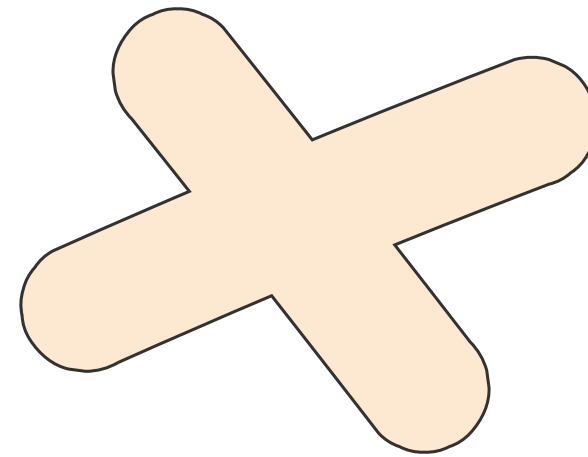

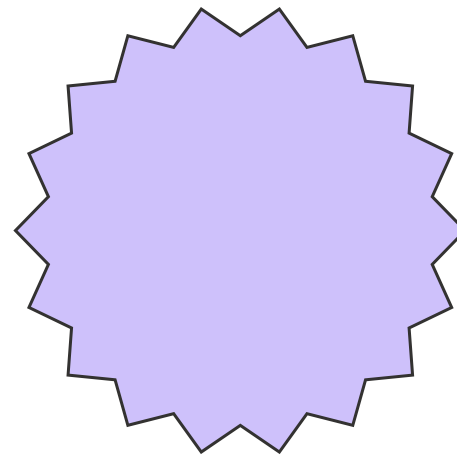

Visual Progress Tracker

 Gain insights into your productivity with charts that display your task completion rates, helping you visualize your progress over time.

Motivational Quotes

The backend includes an endpoint to fetch random motivational quotes, offering users encouragement and motivation as they manage their tasks.
